StarWarsApp User Manual

To execute the application go to command line, navigate to the StarWarsApp folder and run the program typing **StarWarsApp nameofcharacter** where **nameofcharacter** is the name of the Star Wars character you want to check.

If you want, you can move the StarWarsApp.exe file to another location but be sure you also move the Database directory to the same directory.

The first time you execute the program it will create the database and retrieve the information so it will take a moment to do that, please be patient. After that, the application will no longer take any time to start.

Once the program has been launch, you can navigate through the different options with the keyboard. After choosing any option or inputing any character name press *enter key.*

Thank you for downloading.
